

Muhammad Nadeem

(QA Manager)

Mobile No: +966501534354

E-Mail: nadeem.responce@gmail.com

Professional Summary:

Highly skilled and results-driven Quality Control (QC) Manager with over 8 years of experience in quality management, process improvement, and team leadership across [industry, e.g., manufacturing, construction, civil materials, etc.]. Proven expertise in establishing and maintaining effective quality systems, ensuring compliance with industry standards, and overseeing rigorous testing and inspection processes. Adept at developing and implementing quality control procedures, analyzing data for continuous improvement, and leading cross-functional teams to achieve organizational quality goals. Strong communicator, capable of managing client relationships and driving high-quality outcomes.

Core Competencies:

- Quality Control Systems & Process Improvement
- Team Leadership & Staff Development
- Root Cause Analysis & Corrective Actions
- Data Analysis & Reporting
- Completed Awareness Training of ISO:17025 and ISO:9001.
- Risk Management & Safety Compliance
- Supplier Quality Assurance
- Laboratory & Production Audits
- Calibration & Equipment Maintenance
- Document Control & Reporting
- Health & Safety Management

Professional Experience:

QC Manager

Saham Al Manar Trading and Contracting Company

2023 to Till Date

Spearheaded the quality control department, overseeing all QC activities for construction materials, civil engineering

Managed a team of quality control inspectors, technicians, and support staff, ensuring alignment with company goals and compliance with relevant quality standards.

Developed, implemented, and maintained QC processes and standard operating procedures (SOPs) to improve efficiency, consistency, and accuracy of testing and inspection.

Led root cause analysis and implemented corrective actions for non-conformities or quality failures, reducing product defects and improving overall quality performance.

Coordinated internal audits and external inspections to ensure compliance with regulatory standards, including [specific standards such as ISO 9001, ISO/IEC 17025, ASTM, etc.].

Managed the calibration, maintenance, and verification of testing equipment and tools to ensure accuracy and reliability of results.

Maintained detailed records of QC activities, test results, corrective actions, and certifications, ensuring documentation was up to date for audits and regulatory reviews.

Provided training and mentorship to junior staff, fostering a culture of quality awareness and continuous improvement.

Collaborated with cross-functional teams, including production, engineering, and procurement, to ensure high standards of quality were met throughout the production and testing process.

Worked closely with suppliers to ensure raw materials and components met quality standards before being used in production.

QC Manager

Fivegsoft Private Limited (Pakistan)

10 Aug 2017 to 1st Jan 2023

Establishing Quality Standards: Defining the quality criteria and standards for all software projects, ensuring that they align with client expectations and industry best practices.

Creating QC Plans: Developing detailed quality control plans that specify testing strategies, tools, and resources required for each project or release cycle.

Managing QC Team: Leading and coordinating a team of QC engineers or testers, ensuring that they have the necessary resources and skills to perform their tasks effectively.

Training and Development: Organizing training for the team on new tools, techniques, and best practices to keep their skills updated and to ensure that they follow consistent and efficient processes.

Performance Reviews: Conducting regular performance evaluations and providing feedback to improve team performance and efficiency.

Test Case Creation: Overseeing the creation of comprehensive test cases based on project specifications, user stories, and requirements.

Test Automation: Encouraging and managing the implementation of automated testing to improve efficiency, particularly for regression tests.

Manual Testing: Ensuring that manual testing (for areas not suited to automation) is carried out thoroughly, including exploratory testing.

Defining Test Metrics: Establishing key performance indicators (KPIs) to track the effectiveness and efficiency of the testing process.

Defect Tracking: Monitoring and managing defect reports, prioritizing issues, and ensuring they are properly addressed by the development team.

Defect Reporting: Providing regular status reports on quality metrics, such as defect density, test coverage, and test execution results, to stakeholders.

Root Cause Analysis: Analyzing the root causes of defects to prevent future occurrences and improve the overall development process.

Cross-functional Communication: Collaborating closely with product managers, developers, and business analysts to ensure that quality requirements are understood and met throughout the software development lifecycle.

Feedback Loops: Establishing feedback loops with developers to discuss and resolve issues quickly, ensuring that the product stays on track and aligns with quality expectations.

Process Improvement: Continuously evaluating and improving the QC processes, methodologies, and tools to enhance the quality control efforts and reduce time-to-market.

Quality Audits: Conducting periodic audits of the software development and testing processes to ensure compliance with established quality standards and best practices.

Adopting New Tools and Technologies: Keeping abreast of emerging technologies, tools, and trends in quality control and testing to ensure the team is using the most effective approaches.

Release Validation: Ensuring that the software is thoroughly tested and validated for release. This involves overseeing the final verification and validation of the product before it goes live, ensuring it meets the agreed-upon requirements.

Risk Management: Identifying potential risks in the software or testing process and proactively addressing them to minimize delays and ensure smooth releases.

Client Expectations: Ensuring that client requirements are clearly understood and integrated into the testing process. In some cases, the QC Manager may be involved in meetings with clients to discuss quality concerns or provide updates on testing progress.

Quality Assurance Reporting: Communicating the quality status of projects to clients or stakeholders, providing detailed reports on the testing process, issues, and resolution strategies.

Documentation: Ensuring that all QC processes, testing activities, and results are well-documented and accessible for future reference.

Compliance with Standards: Ensuring that testing and quality processes comply with relevant industry standards (e.g., ISO, CMMI, or Agile methodologies) and regulatory requirements (e.g., GDPR for software handling personal data).

Quality Manager Representative(QMR)

RICI Al-Azzaz Company Ltd.

2015 to 3rd May 2017

1. Oversight of Quality Management System (QMS)

- **Ensuring Compliance:** The QMR ensures that the organization's Quality Management System (QMS) is implemented and maintained in line with industry standards (e.g., ISO 9001, ISO/IEC 27001 for IT security, or any other relevant certification).
- **System Audits:** Regularly conducting internal audits to verify the effectiveness of the QMS. They also coordinate external audits (e.g., for ISO certifications) to ensure compliance and identify areas for improvement.
- **Documentation Management:** Ensuring that all QMS documentation (e.g., procedures, policies, and records) is up to date, properly controlled, and accessible to relevant stakeholders.

2. Ensuring Process Conformance

- **Standardization:** Overseeing the creation and adoption of standardized processes for software development, testing, deployment, and maintenance, ensuring consistency and repeatability across teams.

- **Monitoring and Evaluating Processes:** Regularly reviewing and assessing operational processes to ensure they align with quality standards and meet organizational goals. This includes ensuring effective risk management, change control, and continuous improvement practices.
- **Non-Conformance Management:** Identifying, tracking, and managing non-conformance (NC) issues. This includes ensuring corrective and preventive actions (CAPA) are implemented when deviations from the established standards occur.

3. Liaison Between Management and Quality Teams

- **Reporting to Senior Management:** The QMR communicates the effectiveness and performance of the QMS to senior management, providing insights on areas of strength and those needing improvement. They typically prepare management reviews, reports, and action plans.
- **Facilitating Communication:** Acting as a bridge between operational teams (e.g., software development, testing, and production) and management to ensure that quality-related issues are communicated and addressed promptly.
- **Training and Awareness:** Ensuring that all employees are trained and aware of the organization's quality objectives, processes, and policies. This may involve conducting workshops, training sessions, or awareness campaigns.

4. Improvement Initiatives

- **Continuous Improvement:** Driving initiatives for continuous improvement within the organization, encouraging a culture of quality and accountability at all levels.
- **Root Cause Analysis:** Identifying the root causes of quality issues and working with relevant teams to implement solutions that will prevent recurrence.
- **Quality Metrics:** Defining and monitoring key performance indicators (KPIs) for quality, tracking the performance of products or services against established benchmarks, and using this data to guide improvement efforts.

5. Quality Reporting and Documentation

- **Quality Metrics and Reporting:** The QMR tracks, documents, and reports on key quality indicators such as defect density, customer satisfaction, process compliance, and audit results.
- **Regulatory and Standards Compliance:** Ensuring that the organization is complying with relevant external quality and regulatory standards, and overseeing the documentation required for such compliance (e.g., audit reports, certificates, assessments).

6. Customer Focus and Satisfaction

- **Customer Requirements:** Ensuring that the organization understands and meets customer requirements and expectations with respect to product quality. This includes managing customer feedback and complaints, and ensuring they are addressed within appropriate timeframes.
- **Customer Audits and Feedback:** Acting as the point of contact for customer audits and addressing any concerns related to product quality or the organization's quality management system.
- **Client Communication:** Maintaining a focus on the customer experience and ensuring that the quality system is structured to improve product delivery and customer satisfaction.

7. Regulatory and Industry Standards Compliance

- **ISO Certification and Standards Compliance:** Ensuring that the organization adheres to the required quality standards such as (ISO 9001, ISO/IEC 17025:2017)
- **Risk Management:** Ensuring that the organization follows proper risk management processes and controls. This includes identifying potential risks, assessing their impact, and implementing mitigation strategies.

8. Managing Quality Control (QC) and Quality Assurance (QA)

- **Quality Control Oversight:** Overseeing the QC activities, ensuring that products meet predefined quality criteria before they are delivered. This includes ensuring proper testing methodologies (e.g., functional, performance, security) are followed.
- **Quality Assurance Integration:** The QMR ensures QA activities such as process audits, peer reviews, and continuous integration checks are conducted throughout the development lifecycle.

Skills and Competencies Required for a QMR Role:

- **Leadership and Communication Skills:** Ability to lead cross-functional teams, communicate effectively with all levels of the organization, and advocate for quality improvement initiatives.
- **Knowledge of Quality Standards and Methodologies:** Deep understanding of quality management standards (e.g., ISO 9001 etc.)
- **Problem-Solving and Analytical Skills:** Ability to perform root cause analysis, assess risks, and implement corrective and preventive actions.
- **Project Management:** Strong project management skills to oversee quality initiatives and process improvements.

- **Attention to Detail:** Careful attention to detail when reviewing processes, conducting audits, and implementing changes.

Education:

Metric in Science (2005)

Board of Intermediate & Secondary Education Rawalpindi, Pakistan

Diploma of Mechanical Draftsman Trade

(Two years) 2008

Punjab Board of Technical Education Lahore, Pakistan

Auto CAD (Mechanical) (Three Months) 2008

Virtual Institute of Modern Languages & Computer Science Wah cantt Pakistan

Computer Information Technology Course

(Six Months) 2010

Digitech Computer Training center the mall, Wah cantt Pakistan

Diploma of Associate Engineer in Mechanical

(three years) 2011

Punjab Board of Technical Education Lahore, Pakistan

IASP (General Industry) (2014)

International Associate of safety Professionals

IOSH Managing Safety Course (2019)

Institution of Occupational Safety and Health

Nebosh International General Certification in Occupational Health & Safety (2021)

Institution of Occupational Safety and Health

Key Skills:

Quality Management Systems (QMS) Implementation

Process Optimization & Continuous Improvement

Risk Assessment & Failure Mode Analysis

Statistical Process Control (SPC)

Supplier Audits & Management

Documentation & Regulatory Compliance

Advanced Testing & Inspection Methods

Root Cause Analysis & Corrective/Preventive Actions

Quality Management & Process Improvement: Expertise in developing and implementing Quality Management Systems (QMS), process optimization, root cause analysis, and continuous improvement

Team Leadership & Development: Strong leadership skills, with experience managing and mentoring cross-functional teams, fostering a culture of quality, and implementing training programs.

HR & Employee Engagement: Knowledgeable in human resource management practices, including recruitment, performance reviews, employee development, and fostering a positive work culture.

Payroll & Compensation Management: Understanding of payroll processing, benefits administration, and coordination with HR and accounts for accurate compensation calculations and reporting.

Financial Awareness in Quality Control: Ability to manage the **cost of quality**, track financial impact of testing processes, and collaborate with finance teams for budget alignment and resource allocation.

Regulatory Compliance & Risk Management: Familiar with industry-specific compliance and managing risk assessment processes.

Vendor & Client Relations: Skilled in liaising with vendors, contractors, and clients to address quality concerns, audit results, and quality improvement initiatives.

Document Control & Reporting: Proficient in maintaining accurate records, preparing reports, and ensuring the documentation required for audits, certifications, and compliance is complete and up-to-date.

Cross-Department Collaboration: Effective communicator and collaborator with HR, accounts, and product development teams to integrate quality standards, budget constraints, and employee performance into organizational strategies.

Financial Reporting & Budgeting: Basic understanding of financial management practices, including cost analysis, budgeting for quality initiatives, and working with finance teams on resource allocation.

Technical Proficiencies:

Software: MS Office Suite, Google Drive, Laboratory Information Management Systems (LIMS)

ISO Standards Familiarity: ISO 9001, ISO 17025
